States Take the Lead on Legislating BPA Even Where United States and European Nations Have Found BPA Safe as Currently Used

I. Introduction

In spite of an overwhelming amount of scientific evidence indicating that bisphenol A (BPA) is safe in the levels that most consumers encounter on a regular basis today, definitive pronouncements and legislation from the federal government, and recent editorials from the likes of the Wall Street Journal that are calling for an end to unnecessary taxpayer-funded studies of BPA (it is estimated that the National Institutes of Health has funded BPA studies to the tune of $100 million since 1997), individual states have taken up the fight against the “plastic windmill” to double up on legislation that was not even necessary in the first place.

To those new to the “sippy cup wars,” BPA, a hardening chemical additive that is used primarily to make polycarbonate plastic and epoxy resins, has been the subject of litigation and legislation geared toward outlawing or severely limiting its use. Polycarbonate plastics are used in a number of applications including medical equipment, bicycle helmets, safety glasses, automobile bumpers, compact discs and DVDs, and, most notably, baby bottles and sippy cups. Epoxy resins are used in many coatings and other applications, including protective liners in metal cans for canned foods and beverages.

Since 2009, the U.S. Congress has introduced different versions of the “Ban Poisonous Additives Act” in an attempt to ban any food container that is composed, in whole or in part, of BPA and any food container that can release BPA into food. While that legislation has been continually unsuccessful, the Food and Drug Administration did subsequently ban BPA from use in baby bottles, sippy cups, and baby formula packaging in 2013 based on a petition from industry stating that BPA was no longer used for those applications in the marketplace.

In addition to industry voluntarily abandoning the use of BPA in specific products aimed at children, government bodies such as the European Food Authority concluded in early 2015, after extensive study, that dietary and other uses of BPA (including those experienced by our youngest consumers – babies) do not pose a health risk to consumers at any age. Likewise, in December 2014, the FDA conclusively pronounced: “BPA is safe at the current levels occurring in foods.”

Undaunted by the repeated failure to enact BPA banning or labeling legislation and the reality of industry usage, “The BPA in Food Packaging Right to Know Act” was reintroduced in Congress last week. If passed, food manufacturers would be required to label any packaging that contained BPA. A similar bill was introduced but failed to get out of committee in 2013.

Despite existing federal legislation and government-funded studies establishing BPA’s safety, individual states continue to advance a patchwork of legislation aimed at labeling requirements and banning BPA’s use in consumer goods such as reusable beverage containers and cash register receipts. The following is a state-by-state summary of legislation that is pending or that has been enacted or defeated.
## II. Proposed and Pending Legislation

<table>
<thead>
<tr>
<th>STATE</th>
<th>LEGISLATION AND DESCRIPTION</th>
<th>DATE INTRODUCED</th>
</tr>
</thead>
</table>
| Arizona   | *Senate Bill 1376*  
**Summary:** Bans BPA from use in child food containers such as formula packaging. *(legislature adjourned without enacting)*                                                                                                                                                                                                                      | February 4, 2014 |
| California| An advisory panel of the California Office of Environmental Health Hazard Assessment (OEHHA) will consider the possible listing of BPA under Proposition 65. *(Will be considered by the next meeting of the Development and Reproductive Toxicant Identification Committee on May 7, 2015.)*                                                                 | February 20, 2015 |
| Connecticut| *Senate Bill 367*  
**Summary:** Requires a label for all food or drink packaging that contains BPA. *(Similar legislation was introduced in 2014 as SB 316 but was not enacted.)*                                                                                                                                                                                                 | January 22, 2015 |
| Delaware  | *House Bill 109*  
**Summary:** Expands existing BPA legislation to any reusable food container or food containers directed at children. *(legislature adjourned without enacting)*                                                                                                                                                                                               | May 1, 2013      |
| Hawaii    | *Senate Bill 383*  
**Summary:** Bans BPA from child care products and toys. *(legislature adjourned without enacting)*                                                                                                                                                                                                                                                  | January 18, 2013 |
| Hawaii    | *Senate Bill 384*  
**Summary:** Bans BPA from use in beverage and food containers intended for children under the age of 3. *(legislature adjourned without enacting)*                                                                                                                                                                                                                     | January 18, 2013 |
| Hawaii    | *House Bill 351*  
**Summary:** Bans BPA from use in child care products or toys. *(legislature adjourned without enacting)*                                                                                                                                                                                                                                           | January 22, 2013 |
| Hawaii    | *House Bill 396*  
**Summary:** Bans BPA from any product intended for children under 3. *(legislature adjourned without enacting)*                                                                                                                                                                                                                                            | January 22, 2013 |
| Kentucky  | *House Bill 147*  
**Summary:** Bans BPA from children’s food and beverage containers (except for metal cans). *(legislature adjourned without enacting)*                                                                                                                                                                                                               | January 7, 2014  |
| Maryland  | *Senate Bill 175*  
**Summary:** Prohibits the use of BPA in cash register receipts. *(Pending in the Maryland Senate Finance Committee as of February 10, 2015.)*                                                                                                                                                                           | January 30, 2015 |

| District of Columbia         | Council Bill 521  
Summary: The bill prohibits the manufacture, sale, offer for sale, or distribution in commerce of any product intended for use by children under the age of 6 that contains BPA. | March 31, 2011 |
| Illinois                     | Senate Bill 2950  
Summary: Prohibits manufacturers from making or wholesalers from selling food or beverage containers containing BPA intended for children under the age of 3 as of January 1, 2013. Prohibits retailers from knowingly selling food or beverage containers containing BPA intended for children under the age of 3 as of January 1, 2014. Violations can warrant fines of up to $200 per day. | August 27, 2012 |
| Maine                        | House Bill 330  
Summary: Designates BPA as a “high concern chemical” and bans some uses of BPA in products such as baby bottles sold in the state. | April 25, 2011 |
| Maine                        | Legislative Document 902  
Summary: Bans BPA from use in reusable food containers, beverage containers, baby food packaging, and children’s toys. | June 4, 2013 |
| Maryland                     | Senate Bill 213  
Summary: Prohibits the manufacture, sale, or distribution of bottles or cups for children under 4 years old that contain BPA. Companies must use a “least-toxic” alternative when manufacturing such products. | July 1, 2010 |
| Maryland                     | Senate Bill 151  
Summary: Amends existing law to prohibit the use of BPA in infant formula cans. | May 10, 2011 |
| Massachusetts                | 105 MA ADC 650.020 – Listing of Banned Hazardous Substances (2011)  
Summary: Prohibits the manufacture and sale of BPA in baby bottles and sippy cups. | January 7, 2011 |
| Minnesota                    | Senate Bill 247/House Bill 326  
Summary: Prohibits manufacturer or wholesaler from selling any product containing BPA that can be filled with food or liquid and is intended for use by children under 3 (exemption for used children’s products). The law also prohibits retailers from selling any such products, without exception. | May 8, 2009 |
| Minnesota                    | Senate Bill 379/House Bill 459  
Summary: Additional BPA legislation that prohibits the sale of food containers or packaging containing BPA by manufacturers on January 1, 2014 and by retailers by January 1, 2015. The bill also prohibits similarly hazardous replacements. | May 17, 2013 |
| Nevada                       | Assembly Bill 354  
Summary: Prohibits the manufacture, sale, or distribution of certain bottles and cups that contain intentionally added BPA and are intended primarily for use by young children and infants. | May 28, 2013 |

**IV. How Can You Best Prepare?**

Prevention is key in dealing with potential consumer class action or mass tort claims arising from piecemeal state legislation. Thompson Hine's Mass and Toxic Tort lawyers, in addition to helping defend consumer lawsuits, can help companies identify and develop practical ways to limit their exposure to consumer claims. Our lawyers advise and counsel companies on the most prudent strategies to eliminate, reduce, or manage their product liability exposure and other risks. We use our experience with product liability claims and knowledge of potential losses and risks to implement proactive measures before a claim occurs.

In addition to consumer litigation defense and other risk management services, we conduct product and manufacturing audits, prepare product literature and warnings, implement plans to transfer risks contractually, counsel on insurance coverage issues, develop effective record-keeping practices, and prepare and assist companies in responding to crises and accidents.

With respect to BPA or otherwise, education and prevention are essential to minimizing the risk of becoming embroiled in a “bet-the-company” case.
